

ART OF DRUMMING HQ

Double Bass Tracker

User Guide

ketan-lgtm.github.io/art-of-drumming-hq-tracker

Sign in with Google • Works on any device • Data syncs automatically

Overview

The Art of Drumming HQ Double Bass Tracker is a free web app that helps you log every double bass practice session, track your BPM progress over time, set goals, and unlock milestones. Your data is stored securely in the cloud and syncs across all your devices automatically.

What's Included

	Feature	Description
	Session Logging	Record exercise type, sets, set length, BPM range, YouTube link, and session feel
	Statistics	See peak BPM, total sessions, streaks, total minutes, and per-exercise breakdowns
	Progress Charts	Visual BPM trend, session feel, and minutes-per-session charts with exercise filters
	Goals	Set a True BPM baseline and a target BPM for each exercise, with live progress bars
	Milestones	Auto-unlocking achievements for days practiced, streaks, BPM levels, and goal progress
	Cloud Sync	Sign in with Google — data saves instantly and works on any device
	Import Wizard	4-step guided import for CSV or JSON — handles any column names, shows a preview before committing

	Export	Download a JSON backup of all your data at any time
	Quick Help	In-app help button in the top right gives instant access to key tips without leaving the tracker

Getting Started

Step 1 — Open the Tracker

Open your web browser and go to:

`ketan-lgtm.github.io/art-of-drumming-hq-tracker`

Bookmark this URL — it's your permanent home for tracking progress. Works on desktop, tablet, and mobile.

Step 2 — Sign In with Google

On your first visit you'll see the sign-in screen. Click Continue with Google and choose your Google account. You'll be redirected back to the tracker automatically.

TIP You must use the live URL above to sign in — opening the HTML file locally will not work with Google authentication.

Step 3 — You're In

After signing in your name appears in the header and the tracker is ready. Your data is private — no one else can see your sessions.

Logging a Session

The sidebar on the left is your logging panel. Fill in the fields and click LOG SESSION.

Fields Explained

Field	What to enter
Exercise Type	Floor – Full Leg, Floor – Heel Up, Floor – Heel Down, Endurance Ramp, or Core
Total Sets	How many sets you completed
Set Length (min)	How long each set lasted in minutes
Start BPM	The tempo you started at
End BPM	The highest tempo you reached by the end
Session Date	Date of the session (defaults to today)
Day Number	Your practice day count — auto-increments after each log

YouTube Link	Optional — paste a link to a video from the session
Session Feel	Tap an emoji from 😞 to 😊

TIP A green SAVED indicator flashes in the header each time a session is saved to the cloud.

Editing a Session

Click any session in the Recent Sessions sidebar or any row in the Full Log table to load it into the form. Make changes and click SAVE CHANGES. Click CANCEL EDIT to discard.

Deleting a Session

Click the small ✕ button on the right side of any session in the Recent Sessions list.

The Five Tabs

Statistics

A dashboard overview including highest day, total sessions, peak BPM, average BPM gain, total sets, total minutes, current streak, average session feel, milestones unlocked, and per-exercise breakdown cards with goal progress bars.

Progress

Three charts — End BPM Over Time, Session Feel Over Time, and Minutes Practiced per Session. Use the exercise filter buttons to isolate a specific exercise. A green goal line appears on the BPM chart when filtering by an exercise with a goal set.

Goals

True BPM

Your honest baseline without warming up. Set this once using the green field at the top of the Goals tab. All goal progress percentages are calculated from this number.

Exercise Goals

Click + Set Target BPM on any exercise card, enter your target, and click Save. Progress formula:

$$\text{Progress \%} = (\text{Current Peak BPM} - \text{True BPM}) \div (\text{Target BPM} - \text{True BPM}) \times 100$$

TIP If your True BPM is 80 and your Core target is 160, hitting 120 BPM means you are 50% of the way there — not 75%.

Milestones

Achievements unlock automatically. A popup fires the first time each is hit. Categories: Practice Days (10/30/50/100/200), Streaks (7/14/30 days), BPM Levels (100/120/140/160), Time (60min/5hr/1000min), and Goal Progress (25%/50%/75%/100% per exercise).

Full Log

Complete table of every session sorted newest first. Click any row to load it into the edit form.

Import & Export

Exporting Your Data

Click ↓ Export in the header. A kicktracker-backup.json file downloads to your device containing all sessions, profile, True BPM, and goals.

TIP Export regularly and keep the backup in iCloud, Dropbox, or Google Drive.

The Import Wizard

The Import Wizard is designed to handle large amounts of historical data — hundreds of sessions — without requiring you to format your spreadsheet in any particular way. Click ↑ Import in the header to open it.

The wizard has four steps:

1 · Upload File	2 · Map Columns	3 · Preview	4 · Done
-----------------	-----------------	-------------	----------

Step 1 — Upload File

Drag and drop your file into the upload zone, or click to browse. The wizard accepts:

- **CSV spreadsheet** — any column names, any order. The wizard figures it out.
- **JSON backup** — a previously exported kicktracker-backup.json file.

Once your file loads, the row count and column count are displayed. Click Next to continue.

TIP You can also click Download CSV Template to get a pre-filled example showing the right structure.

Step 2 — Map Columns (CSV only)

The wizard automatically guesses which of your columns corresponds to each tracker field. It handles common variations:

- "BPM", "tempo", "peak bpm", "top bpm" all map to End BPM
- "date", "session date", "practice date" all map to Date
- "exercise", "type", "ex type" all map to Exercise Type
- Capitalisation and spacing don't matter — "Start BPM" and "startbpm" are treated the same

Review the auto-guessed mapping and adjust anything that looks wrong using the dropdowns. Only two fields are required:

- **Day Number** — which day in the practice sequence
- **End BPM** — the peak tempo reached

All other fields will use sensible defaults if not mapped (Sets: 4, Set Length: 5 min, Exercise: Core, etc.)

Exercise type values in your CSV are also fuzzy-matched — "heel up", "Heel Up", "floor heel up" all map to Floor – Heel Up automatically.

Step 3 — Preview

Before a single session is imported, the wizard shows you a full preview table of every row. Each row is colour-coded:

- ✓ **Green — Ready to import.** All required fields present, no duplicates.
- ⚠ **Orange — Warning.** A non-critical field is missing (e.g. date defaulted to today). Will still import.
- ✗ **Red — Error.** Missing Day or End BPM. Row will be skipped.
- ⌘ **Grey — Duplicate.** This day + exercise combo already exists in your tracker. Will be skipped.

A summary at the top shows the count in each category before you commit. If something looks wrong, click Back to adjust the column mapping.

TIP For 400 sessions you'll see all 400 rows in a scrollable table. You can spot-check before importing.

Step 4 — Done

Click Import [N] Sessions to confirm. Sessions are uploaded to the cloud in batches of 100, so even large imports complete reliably. A confirmation screen shows how many were imported. Your tracker updates immediately.

Date Formats Accepted

The wizard recognises many date formats automatically:

- 2024-01-15 (YYYY-MM-DD — preferred)
- 01/15/2024 (MM/DD/YYYY)
- 15/01/2024 (DD/MM/YYYY)
- Jan 15 2024
- 15 Jan 2024

If a date can't be parsed, it defaults to today's date and shows as an orange warning in the preview.

Quick Help

Click the ? Help button in the top-right header at any time to open the Quick Guide overlay. It shows key tips for logging sessions, understanding goals, importing data, and cross-device sync — without leaving the tracker.

Using Across Devices

Because data is stored in the cloud, the tracker works identically on any device. Open the URL, sign in with the same Google account, and all your sessions load automatically.

- Desktop — full sidebar and chart layout
- Tablet — same layout, touch-friendly
- Mobile — works in Safari or Chrome

TIP Bookmark the URL on your phone's home screen for quick access after practice.

Frequently Asked Questions

Is my data private?

Yes. Row-level security in the database means only you can read or write your sessions.

Does it cost anything?

No. The tracker is completely free — no ads, no paid features.

What if I clear my browser or switch browsers?

Your data is in the cloud, not the browser. Clearing cache has no effect — just sign in again with the same Google account.

What is True BPM?

Your honest cold baseline — the tempo you can play at right now without warming up. It's the starting point for goal progress calculations.

My goal progress shows a weird percentage — why?

Make sure True BPM is set correctly. Progress calculates from True BPM to your target, not from zero.

My CSV imported but the exercise types look wrong.

The wizard fuzzy-matches exercise names but may not catch every variation. Check the column mapping in Step 2 and make sure your exercise column is mapped correctly. You can also edit individual sessions after import by clicking them in the Full Log.

Can I import the same file twice?

Yes — duplicates are detected by day number + exercise type combination and skipped automatically. You won't get double entries.

Can I share my progress with my teacher?

Currently the tracker is private per user. The best way to share is to export a JSON backup and send the file, or screenshot the Progress chart.

Support

The tracker was built for Art of Drumming HQ students. If you have questions, reach out to your instructor.
